

MANHOLE EVENT PREVENTION

PreVent from **Novinium** reduces injuries to people and property and improves public safety by actively reducing manhole incidents, such as smoking manholes, fires, and explosions. The ventilated cover's crowned surface, water dams, and air slots limit water and salt intrusion. A ventilator inside the manhole extracts combustible gases and is removable for unimpeded internal access. PreVent fits any size manhole and can be retrofitted to existing manholes. Cloud-based sensors predict events and transmit real-time alerts.
